Overview

This file contains Python source code and docker files to build and run two small microservices, as well as screenshots of the results

What you need

Python 3

Docker

Files Included

Dockerfile.sender: This is the docker file to build the sender container

Dockerfile.receiver: This is the docker file to build the receiver container

sender.py: The Python source code for the sender microservice

receiver.py: The Python source code for the receiver microservice

5 screenshots showing the results

Resources

I used some of the code from the slides to help as my boilerplate for my flask application

For help with Flask, I used this article (<https://flask.palletsprojects.com/en/stable/quickstart/>)

For help with Python Request, I used this article (https://www.w3schools.com/python/module_requests.asp)

For help with Docker and the Docker files I used this article (https://docs.docker.com/get-started/workshop/02_our_app/)
